Metal sheets lifter

Tubular clamps for lifting bundles of sheets

Tubular brackets for sheet metal packs simplify handling operations thanks to their lightweight and maneuverable construction. It is recommended to always use them in opposing pairs, with two-arm chain slings of adequate length. These brackets are particularly suitable for the metalworking sector, allowing for the quick lifting of even thick sheet metal packs without the need for a spreader bar. In addition to the available standard versions, we can develop customized equipment based on the dimensions and specific weight of the sheet metal packs you intend to lift. Please communicate your needs to us, and we will be happy to offer you a tailored solution.
