DATA SHEET - ROUND CRANE MAN BASKET

Crane man baskets

Round crane man basket

Round man-lifting basket with fixed roof

Explore the practicality of our round crane man baskets, designed for the safe lifting of people during high-altitude operations. The versatility of the round basket makes it the ideal choice for construction, renovation, or routine and extraordinary maintenance activities, especially in contexts with limited space. With a primary focus on safety, the basket features an inward-opening door, a safety handrail to prevent accidental finger crushes, and anchoring points for connecting a fall restraint device. Lifting is reliably achieved through the 4 hooks arranged on the basket roof. Additionally, with a limited tare weight, it easily adapts to cranes with reduced capacity. Choose our crane basket for safe lifting and worry-free maintenance.
