# Galvanized self dumping bin

## Galvanized self dumping bin for general muck, rubble and waste removal

In addition to the painted version, we also offer the galvanized version of the A-D model self dumping bin. There are several reasons to choose a galvanized version, here are some: Corrosion Resistance: The zinc coating protects the bucket from corrosion, making it ideal for damp or moisture-exposed environments, such as construction sites. Durability: The zinc coating makes the product more resistant to wear and abrasion, helping to extend its lifespan. Ease of Maintenance: Galvanized products generally require less maintenance compared to non-galvanized ones, as they are less prone to corrosion and oxidation. Aesthetic Appearance: Galvanized products have a clean and professional look due to their uniform coating. Compliance with Regulations: In some situations, environmental or safety regulations may require the use of galvanized equipment. Versatility: Galvanized products can be used in a variety of construction and industrial applications. However, choosing a galvanized self dumping bin depends on the specific needs of your project or operations. Before making a choice, it is important to consider the environment in which the equipment will be used, the type of material to be handled, and other relevant factors. All our boat skips are built in compliance with UNI EN ISO 12100, UNI EN 13854, ISO 8686, UNI EN 10027, and UNI EN 10204 standards. Each product is accompanied by a metal ID plate, a certificate of conformity, and a user and maintenance manual. We offer a one-year warranty on all our products, in accordance with the European Directive.
