DATA SHEET - GALVANIZED BRICK PALLET LIFTING CAGE

Storage and handling equipment

Galvanized brick pallet lifting cage

Galvanized cage for pallet handling with crane

Our cage is designed to ensure safe and efficient lifting of pallets of various sizes. Thanks to the two sturdy prongs, the pallet is forked and lifted securely and controlled. Lifting is carried out via a four-arm chain, securely fixed at the corners of the crate. This accessory, highly useful in large construction sites, offers additional safety against side falls, ensuring that the pallet remains securely positioned during lifting and transportation. The sturdy structure helps ensure stable and risk-free handling. Upon request, a dismountable and hot-dip galvanized version is also available, ensuring increased durability over time. This product is built and tested according to UNI EN ISO 12100, UNI EN 10027-1, and UNI EN 10204 standards and is issued with the appropriate metal ID plate and certificate of conformity. All our products are covered by a one-year warranty (European Directive).
