DATA SHEET - PROPANE GAS CYLINDER CARRIER

Warehousing logistics

Propane gas cylinder carrier

Foldable propane gas cylinder carrier

The foldable propane gas cylinder carrier is designed for the safe lifting and handling of gas cylinders by crane or forklift.

The robust steel structure is equipped with upper lifting points and lower fork pockets. The folding ramp facilitates loading and unloading operations, while dedicated securing points allow the cylinders to be safely secured during handling.

The fully collapsible structure significantly reduces overall dimensions during transport and storage. The carriers can also be stacked to optimize space in warehouses and on construction sites.

The carrier can accommodate two large cylinders or several smaller-diameter cylinders.

All our products are manufactured and tested in compliance with applicable regulations and are supplied with the appropriate identification label, certificate of conformity, and operation and maintenance manual. All our products are covered by a one-year warranty (European Directive).
