DATA SHEET - LIFTING CLAMPS WITH ROTATING RUBBER PLATES

Lifting clamps

Lifting clamps with rotating rubber plates

Clamp for handling with swivel plates

The distinctive feature of this clamp lies in the presence of a bearing inside the rubber pad, which allows it to rotate freely 360 degrees. This feature is particularly advantageous as it facilitates the rotation of prefabricated elements from horizontal to vertical positions and vice versa with relative ease. The PZM-G model is a clamp manufactured with high-quality materials, achieved and guaranteed by extensive experience in the sector. All our clamps are built and tested according to UNI EN 13155, UNI EN ISO 12100, UNI EN 13854, ISO 8686, and UNI EN 10204 standards, and are issued with the appropriate label, certificate of conformity, and user manual. All our products are covered by a one-year warranty (European Directive).
