DATA SHEET - MANUAL PAVING BLOCK SPLITTER

Lifting clamps

Manual paving block splitter

Manual paving block splitter

Boscaro's paving block splitters represent the ideal option for precise cutting of concrete pavers, widely used in pavements, bricks, porphyry, and stones. This manually operated tool has been carefully designed to ensure the necessary strength for precise cutting of interlocking blocks, with a maximum thickness of 10.5 cm. Thanks to an intuitive knob, the operator can easily adjust the blades according to the material thickness, ensuring precise control during cutting operations. The presence of robust wheels provides the block cutter with remarkable ease of transport, facilitating movement even in harder-to-reach areas. The blades, made with a special heat treatment, constitute the core of the machine, ensuring precise and reliable cuts over time. All our clamps are built and tested according to UNI EN 13155, UNI EN ISO 12100, UNI EN 349, UNI ISO 8686, and UNI EN 10204 standards and are issued with the appropriate label, conformity certificate, and user and maintenance manual. All our products are covered by a one-year warranty (European Directive).
