DATA SHEET - DETACHABLE GALVANIZED CRANE MAN BASKET

Crane man baskets

Detachable galvanized crane man basket

Detachable galvanized crane man basket without roof

The detachable crane man basket is designed to ensure safety, practicality, and maximum operational efficiency in lifting and height maintenance operations.
The structure is **detachable into 5 side panels and a base frame**, a feature that allows highly efficient handling both during transport and storage. Once disassembled, the basket significantly reduces its overall dimensions, facilitating logistics and optimizing space in warehouses or transport vehicles.
When assembled, the side panels are **bolted together** and further secured to the base frame, ensuring a stable, rigid, and safe structure during use. The bolted assembly system allows for quick and repeatable installation without compromising the overall strength of the device.
The roofless configuration provides greater operational freedom and improved visibility during work activities while maintaining high structural stability and robustness.
Made of high-strength materials and compliant with the main safety standards, the basket is equipped with certified lifting points for use with cranes and compatible lifting systems.
Thanks to its detachable and compact structure, it represents the ideal solution for mobile construction sites, rental companies, and operators who frequently need to transport equipment between different job sites.

Application sectors

Lifting
