CPP-2PA	200	140	2	1000	700	1150

DATA SHEET - MAN BASKET FOR TRUCK-MOUNTED CRANES

Crane man baskets

Man basket for truck-mounted cranes

Steel man basket for truck-mounted cranes

The steel man basket for truck-mounted cranes is the ideal solution for intensive use on construction sites and in industrial maintenance operations.
The all-steel structure ensures high strength and impact resistance while maintaining all the safety features required for lifting two operators.
The man basket is equipped with:

- automatic gravity levelling system;
- front access door;
- perimeter handrail;
- manual cylinder locking valve for emergency situations.

The standard version does not allow the crane to be certified as a Mobile Elevating Work Platform (MEWP). For these applications, a version equipped with the Fullmatic electronic system is available.

Application sectors

Lifting
